Reason for Allowance

The following is an examiner's statement of reasons for allowance:

The reference to US Patent 4473304 to Ketner shows a watch movement comprising an annular frame (12) of external diameter D, provided with a round central opening (16), an energy source (col. 3, lines 66-68), a work train (34, 36, 38), a motion work train (22, 24) arranged to bear analog time display means (22', 24'), and correcting means (32) for displaying means (22', 24'). Applicant's claimed invention further discloses motion work train comprising a motion work mobile containing a wheel and a pinion, a cannon pinion driven by the motion work wheel and intended to bear a minute hand, and an hour wheel driven by the motion work pinion and intended to bear an hour hand, in that the cannon pinion and the hour wheel are concentric to the frame and have a central opening substantially equal to d, and in that the work train contains a first mobile provided with a spindle on which the motion work mobile is friction-mounted. Furthermore, the watch movement of Ketner does not have the particular motion work assembly and there seems to be no motivation to modify the device shown in Ketner to accommodate such a motion work assembly.

Claims 2-25 have been found to be allowable as being dependent upon the allowable claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
